

Insider threat detection & response

Protect your organization from insider threat and cyberattacks with the Jazz Platform – an end-to-end security software that prevents, detects, and acts with the use of a single lightweight agent.

Prevent human errors

Your employees are the easiest way to breach your organization – train them continuously on the job, instead of ineffective classroom training.

Detect & stop insider threats

You can better identify, detect and immediately respond to both “known” and “unknown” threats with rule-based policies and machine learning.

Achieve compliance

Unparalleled visibility to all the data regardless of policy violations. Understand what happened right away in the case of an incident with an effective analyst workflow.

Powerful detection coupled with immediate response

DETECT:

FIND THE **KNOWNS**:

Rule-based policies:

- Out-of-the-box value
- Customizable
- Create your own
- Light content inspection

FIND THE **UNKNOWN**S:

Machine learning:

- Pre-designed sensors crafted & trained to identify insider threat
- Customize risk score sensitivity
- Clear and transparent outcomes

IMMEDIATE RESPONSE:

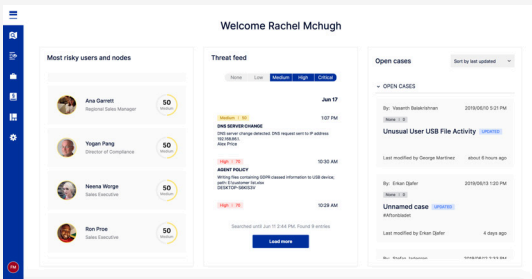

-  Take screenshot
-  Isolate
-  Multi-factor authentication
-  Lock
-  Display message

- Training policy packs providing immediate feedback with on-screen messages for the most effective training.
- DLP policy packs combined with content inspection on files.
- Additional policy packs: web, WiFi, USB, files (type, content, name), mail, applications, printing, connections, logins, Dropbox file sync, Box file sync, Google Drive file sync, OneDrive file sync, IP addresses, Rsync, SFTP, SCP, and risk of leaving.

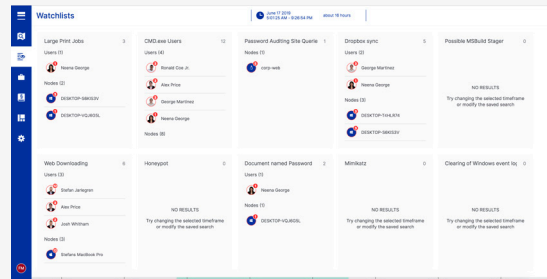

Unparalleled data visibility, threat hunting and forensics

- All the data continuously reported in one place, not limited to policy violations
- Data presented in comprehensible, meaningful view, incl. **connections view** and **watchlists**
- Threat hunt and uncover user event details in seconds without using query language
- Supported with analyst workflow to conduct an investigation with individual or cross-team **cases**
